

# Remote Sensing of Environment

<http://www.elsevier.com/locate/rse>

## SCOPE OF THE JOURNAL

Remote Sensing of Environment serves the remote sensing science and applications community with the publication of papers on science, applications and technology of remote sensing of Earth resources and environment. Thoroughly interdisciplinary, this journal publishes on terrestrial, oceanic, and atmospheric sensing. The emphasis is on biophysical and quantitative approaches to remote sensing at local to global scales. Areas of interest include, but are not necessarily restricted to:

Agriculture, forestry and range  
Ecology, Earth and environmental sciences  
Geography and land information  
Geology and Geoscience  
Hydrology and water resources  
Atmospheric science and meteorology  
Oceanography and marine science  
Biophysical-spectral models  
Image processing and analysis  
Sensor systems spectral-radiometric measurements

In addition to original research papers, comprehensive review articles are welcome. Brief papers containing significant new data or techniques may be published as Short Communications.
