

Discussion/Quiz #6

For Discussion/Quiz #6, there will be 2 deliverables to accomplish for full-credit.

- a) We are looking to the future a great deal right now. I would like us to look to the future of materials as well with our last Discussion/Quiz #6. I would like you to research a new material, a use of a current material in a new application or a new process in production of a material.

For example, respectively from the choices above, from this past week there was an article on [Super Steel](#), [Wood urban buildings](#) have been getting a lot of attention in the past few years and [Using Solar energy to produce cement](#) was in the press in the Fall of 2019.

I would like you to post a brief description of the new material, a use of the current material in a new application or the new process in production of a material. You may post a website or a link to a video as well, if that will be helpful to understanding.

- b) Reply to someone else's post in a productive way.

Post and a reply post are due on Monday, June 1st at 11:30 pm.
